

MCS-CO3

Addressable Carbon Monoxide Detectors

MCS-CO3 is an intelligent, addressable carbon monoxide (CO) detector with integral communication to provide point location for alarm communication and selective maintenance.

This detector has point ID capability that enables each detector address to be set with rotary address switches providing exact device locations. The modern design and expanded color options support contemporary aesthetic demands. In addition, each detector is constructed for exceptional installation and maintenance efficiency.

MCS-CO3 incorporates carbon monoxide (CO) detection principles meeting the UL 2075 standard for system-connected life safety carbon monoxide detection. As an addressable detector, additional modules are not needed for point ID which streamlines the installation process. This allows you to upgrade your addressable fire system to meet new CO code requirements in applications with fuel burning equipment such as furnace areas and laundry rooms.

Released through the incomplete burning of various fuels, CO is a colorless, odorless and deadly gas that is virtually impossible to detect with the human senses. Because the potential exists for dangerous levels of CO to accumulate in almost any building, legislation mandating the use of CO detection in commercial spaces continues to grow.

MCS-CO3 is recommended for use in conjunction with B200S intelligent sounder bases. These bases can generate a Temp 4 pattern for CO alarm indication. They recognize the System Sensor® synchronization protocol.
